

Odie's Oil Instructions

Thank you so much for choosing Odie's
The Odie's Finishes are true hard wax oils and proudly made of 100% natural ingredients with no solvents or dryers. Unlike other finishes it takes just a few easy steps to ensure a brilliant and long lasting finish for your project. We want you to succeed!

- Stir your jar thoroughly (Oil only) as ingredients settle over travel/time.
- Tools needed: fine white, non abrasive, non-woven pad and a clean cotton terry towel.
- Use the non abrasive pad to work the product into your project surface. The friction from the application helps drive the product into the grain. A little Odie's goes a long way, so don't overdo it.
- After working the product into the surface with the pad, allow it to cure for 45 minutes to 2 hours, depending on product used. You can wait a bit longer but your buff off may be a bit tougher.
- After waiting for the product to cure take a clean terry towel and proceed to BUFF OFF all the Odie's from your project surface. When your towel is loaded up with product switch to a clean terry towel until the entire surface is buffed off and NO product remains.
- TEST. If you can swipe a clean finger across the surface and not leave a mark you are done.
- Your piece can be handled almost immediately after buffing however, we suggest you give it a day or two to cure further before any use. If you know the piece is going to see heavy traffic, we suggest you give it a week or two further curing time for best results.
- Additional coats of Odie's products can be applied using these same easy steps above. We recommend waiting 24 hours between coats.
